
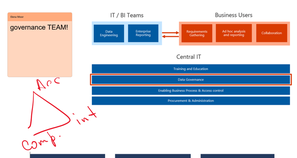
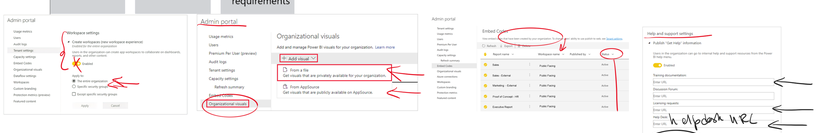
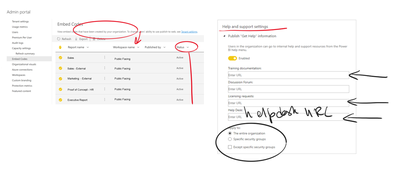
Administrator's tasks:

governance	Collaboration	Sharing	automation
		sharing – collaboration. within org. Distribution! – sharing outside of the org APPs, embedded	



Visibility	Control	Compliance
• Understand system state and activity	• Enforce policies for use of the system	• Configure the system to achieve compliance requirements





Sharing:

Service side workspaces personal and shared Applications :)

Privacy levels specify an isolation level that defines the degree.

Private data source:	Organizational data source:	Public data source:
A Private data source contains sensitive or confidential information, and the visibility of the data source may be restricted to authorized users.	An Organizational data source limits the visibility of a data source to a trusted group of people.	A Public data source gives everyone visibility to the data contained in the data source.

Unified Audit Log	Power BI Activity Log
Includes events from SharePoint Online, Exchange Online, Dynamics 365, and other services in addition to the Power BI auditing events.	Only includes the Power BI auditing events.
Only users with View-Only Audit Logs or Audit Logs permissions have access, such as global admins and auditors.	Global admins and Power BI service admins have access.
Global admins and auditors can search the unified audit log by using Office 365 Security & Compliance Center, the Microsoft 365 Security Center, and the Microsoft 365 Compliance Center.	There's no user interface to search the activity log yet.
Global admins and auditors can download audit log entries by using Office 365 Management APIs and cmdlets.	Global admins and Power BI service admins can download activity log entries by using a Power BI REST API and management cmdlet.
